

# The way we capture and learn from patient safety events when we report an incident in Safeguard is changing from 1st December 2023

## INTRODUCING THE LEARN FROM PATIENT SAFETY EVENTS (LFPSE) SERVICE

The NHS is launching the Learn from Patient Safety Events Service during 2023, a new national service for collecting and analysing records of patient safety events. This new service will improve learning, and make care safer for patients.

To ensure we can participate in the new service and benefit from a more modern system, we will be introducing some changes in the coming months to the way you record patient safety events.

### IMPROVED DATA

LFPSE collects patient safety data that better supports the NHS to accelerate the pace of safety improvement.

### BETTER ANALYSIS

LFPSE utilises technological advances in data analysis to support the review of recorded events.

### MORE LEARNING

LFPSE provides better opportunities for learning to support patient safety improvement.

You can find out more information under the helpful documentation section on the home page when you log into Safeguard.
