

ABLOY WALL PDs GUIDE

Key Revalidation "Charging Key"

A key must be inserted in a Wall PD ("Charged") to stay active. Once revalidated, the key stays active for 20hrs it will then allow access to assigned locks. During the process it also runs firmware updates to the keys. If a key is not revalidated within the specified interval, it becomes inactive until it is revalidated again.

Please be patient if your key is taking a little longer than normal to revalidate/update.

Revalidating schedule still needs to happen even if charging days are missed (e.g. If off for 1 week the key will need 7days worth of updates)

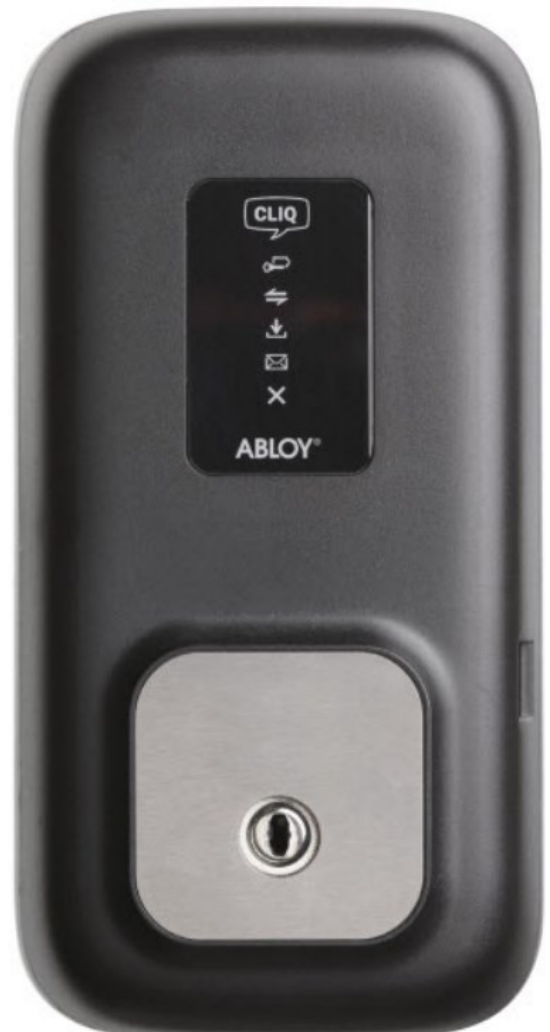

*If you get a red  please return to pharmacy for repair.

*If you get a Low Battery Warning  please return to pharmacy for a replacement battery.

Terms and Conditions

By inserting your key into this device, you agree that your keys activity can be audited at any time. The key has been allocated to **YOU** by Pharmacy Informatics and it is **NOT** to be shared with others

| LED Indications | Buzzer | Interpretation |
